SEE FAST RESULTS WITH NEW TALON® GLOW.

A first to integrate UV tracer with resistance breaking brodifacoum in a highly palatable pasta-based sachet.

TALON GLOW - IT SHOWS WHAT YOU CAN DO

SEE FAST RESULTS WITH SYNGENTA TALON GLOW

- ▶ New addition to the renowned TALON® rodenticide range
- ▶ Integrated UV tracer reveals when target pests have been successfully treated
- ▶ Highly palatable pasta-based bait, supplied in easy to use sachets

Talon® Glow offers a new level in precision targeting pests from Syngenta. The level of rodent faeces showing the UV tracer after treatment enables operators to identify when populations of rats and mice have taken bait – thereby only baiting for the appropriate time.

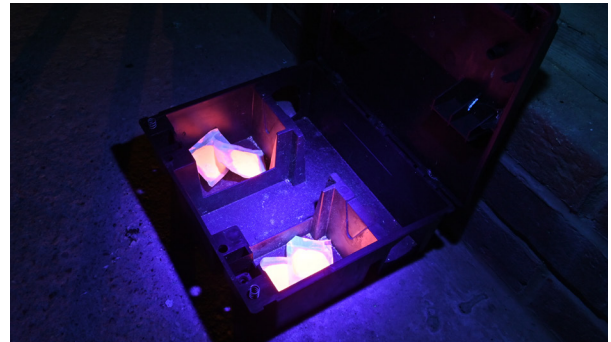

Integrated UV tracer gives confidence in results and demonstrates to customers how effectively Talon Glow has worked.

Containing the same single-feed brodifacoum active across the Talon range, the new <30ppm Talon Glow formulation gives complete resistance breaking control for challenging rodent populations.

The new sachet delivery is a first for a Talon product in the UK, making it quick and clean to use in boxes and baiting points.

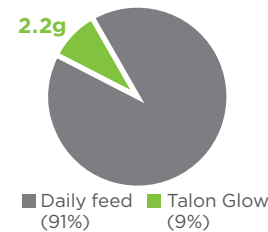

- ▶ 15 gramme sachet – individually branded with Talon Glow
- ▶ Supplied in 5 kg tub – over 300 sachets
- ▶ Easy to secure on rods in bait boxes

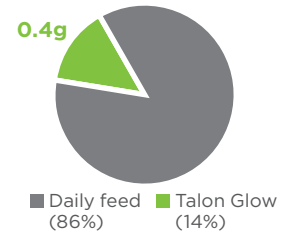

Trials have shown excellent palatability of Talon Glow, with preferential feeding over other available foods.

Research has shown 100% control of both rats and house mice consuming Talon brodifacoum baits. Field trials indicated eradication of house mice in six days from the start of Talon Glow baiting, with 10 days for brown rat population.

Talon Glow Rats (LD50)

Talon Glow Mice (LD50)

Low bait consumption required - with an average of only 2.2g to kill rats and just 0.4g for mice with the <30ppm formulation.
