## NEW reliable monitoring solution

Talon®Track is a new solution that allows the identification and tracking of rodent activity. It displays the same high palatability as Talon®Soft, without the active ingredient. When used in combination with Talon®Soft it allows great continuity when transitioning from a tracking to a controlling phase.

- ▶ Allows the detection of rodent activity
- ▶ Encourages rodents to enter bait stations and feed on the bait
- ▶ Enables better success rates of rodent control programs
- ▶ Optimizes rodenticide use and allows PCOs to have an integrated and responsible approach to rodent control

## The Track, Treat and Monitor approach

Talon®Track works in synergy with Talon®Soft on a 360° approach to implement successful rodent control programs.

### Phase 1: TRACKING with Talon®Track

Use Talon®Track as a pre-treatment to identify signs of rodent activity and encourage rodents to enter the bait station whilst determining the size and scale of the infestation,

### Phase 2: TREATING with Talon®Soft

Replacing Talon®Track with Talon®Soft ensures continuity when transitioning from the non-toxic to the toxic formulation. This avoids the “neophobia” phenomenon and enable a successful rodent control program.

### Phase 3: MONITORING with Talon®Track

Extend the application of Talon®Track as a non-toxic bait applied post treatment for ongoing monitoring especially in food sensitive environments such as storage facilities and post treatment food preparation environments.
